

Experiment Questionnaire

Thank you very much for participating in this 3D User Interfaces experiment. I would like to ask you a few questions. Your privacy is protected because your name will not appear on this questionnaire.

Information about you:

1. What is your occupation or (if a student) major field of study?

Software Engineer

2. What is your age? 26

3. What is your gender?

Female _____

Male X

4. What is your race?

White _____

Asian _____

Black/African

_____ Other _____

Prefer not to respond X

General Questions

1. How easy is this application to use? (circle one)

❖ Very easy to use

❖ Easy to use

☒ Neither easy nor difficult to use

❖ Difficult to use

❖ Very difficult to use

- The QR codes were close together so it kept scanning the wrong one.
- Going back from the website sometimes froze unity

2. Is this something you wish you had in school? If not- why

Using QR codes for additional information is used in textbooks

3. What is an important feature you think the application is missing?

I did not see anything in the app that is augmented reality / 3D.

4. Is there anything about the application that would make you hesitant to use it?

Having a slow phone makes scanning difficult

5. Do you think that an application of this variety could enhance your learning experience?

This was in my textbooks, but I never used it.

6. Can you think of any improvements to be made to the application?

7. Can you see this application impacting students outlook on learning? If so, in what ways?

I hate to be a bummer but this app doesn't have augmented reality within it.

The app scans a QR code to bring up information on the phone. This is already implemented into textbooks.
